WORKING PROGRAM OF THE DISCIPLINE

"Tools of Business Process Management"

Field of study
38.03.02 Management

Educational program (profile)
"Business Process Management"

Qualification (degree)
Bachelor

Form of study
Part-time

Moscow 2022

1. The goals of mastering the discipline

The purpose of mastering the discipline "Tools of Business Process Management" is to form students' holistic systemic understanding of the essence of various organization management tools, organizational development management models, as well as skills and abilities in the field of assessing the effectiveness of organization management.

The main tasks of mastering the discipline " Tools of Business Process Management " include:

- to give knowledge of the basic tools of organization management;
- to teach how to apply business process management tools in practice;
- analyze the performance and effectiveness of the organization's management.

2. The place of the discipline in the structure of the bachelor's program

The discipline "Business process management tools" refers to the disciplines of the part formed by the participants in the educational relations of block B1.2.15. It is related to the following disciplines:

- "Management in industries and areas of activity";
- "Perspective Management".

3. The list of planned learning outcomes for the discipline (module), correlated with the planned results of mastering the educational program

As a result of mastering the discipline, students form the following competencies and the following learning outcomes should be achieved as a stage in the formation of the relevant competency:

Cipher	Name	professional standard	OTF
---------------	-------------	------------------------------	------------

PK-2	Able to design and implement cross-functional processes of an organization	07.007 "Process management specialist"	Design and implementation of cross-functional processes of the organization or administrative procedures of the organization
------	--	--	--

Competency code	As a result of mastering the educational program, the student must have	Code and name of the indicator of achievement of competence	List of planned learning outcomes by discipline
PK-2	Able to design and implement cross-functional processes of an organization	<p>IPK-2.1. Knows methods of designing functional role models; methods of structural decomposition of cross-functional processes and administrative regulations; principles and methods for measuring and analyzing performance indicators of cross-functional processes and administrative regulations; principles and methods for translating the organization's goals into indicators of cross-functional processes and administrative regulations; methods and techniques of process optimization; principles and rules for working with documents and with regulatory and methodological documentation; specialized software for process control; basics of operational management; fundamentals of economics, cost accounting and performance evaluation; theory of process management; principles of integration of corporate information systems; basics of project management; principles and methods of change management;</p>	<p>Know:</p> <p>on the basic principles of the functioning of the organization;</p> <p>Be able to:</p> <p>identify new market opportunities and implement the formation of new business models;</p> <p>Own:</p> <p>skills to use the basic principles of the functioning of the organization.</p>
		<p>IPK-2.2. Able to aggregate, structure and generalize information; develop local regulations in the field of managing cross-functional processes; use specialized software for process management; control the compliance of the developed documents with regulatory and methodological documentation; measure the effectiveness of a cross-functional process or administrative procedure; identify the potential for improving the efficiency of a cross-functional process or administrative procedure; formulate and justify proposals to improve the efficiency of cross-functional</p>	<p>Know:</p> <p>about the main tools organization management;</p> <p>Be able to:</p> <p>apply new product development methods;</p> <p>Own:</p> <p>skills to identify new market opportunities and</p>

		<p>processes or administrative regulations; communicate, hold workshops, find consensus; evaluate the resources needed to improve a cross-functional process or administrative procedure; evaluate the risks of the chosen decisions; develop requirements for integration with corporate information systems; prepare and conduct presentations; develop and present action plans, evaluate the achievement of results, develop corrective actions to achieve plans; manage change implementation projects; plan and conduct staff training; evaluate the actual effectiveness of the implementation or improvement project.</p>	<p>form new business models.</p>
		<p>IPK-2.3. Has the skills to systematize the collected information about the cross-functional process of the organization or the administrative regulations of the organization; documenting the cross-functional process of the organization or developing the administrative regulations of the organization in accordance with the requirements of regulatory and methodological documentation; development of an executable cross-functional process of the organization or administrative regulations of the organization using specialized software for process management; development of control points that allow assessing the degree of implementation of the regulations, and methods for measuring the performance indicators of the organization's cross-functional process or the organization's administrative regulations; development of proposals to improve the efficiency of the cross-functional process of the organization or the administrative regulations of the organization; registration of the results of the development or refinement of the cross-functional process of the organization or the administrative regulations of the organization; planning the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; implementation of a cross-functional process of the organization or administrative regulations of the organization or its improvement; evaluating the effectiveness of the implementation of a cross-functional process of the organization</p>	<p>Know:</p> <p>basic methods for assessing the effectiveness of the use of organization resources;</p> <p>Be able to:</p> <p>collect, process and analyze information about the competitive environment;</p> <p>Own:</p> <p>skills in applying the collection, processing and analysis of information about the competitive environment.</p>

		<p>or the administrative regulations of the organization or its improvement; instructing personnel on the implemented or improved cross-functional process of the organization or the administrative regulations of the organization. registration of the results of the development or refinement of the cross-functional process of the organization or the administrative regulations of the organization; planning the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; implementation of a cross-functional process of the organization or administrative regulations of the organization or its improvement; evaluating the effectiveness of the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; instructing personnel on the implemented or improved cross-functional process of the organization or the administrative regulations of the organization. registration of the results of the development or refinement of the cross-functional process of the organization or the administrative regulations of the organization; planning the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; implementation of a cross-functional process of the organization or administrative regulations of the organization or its improvement; evaluating the effectiveness of the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; instructing personnel on the implemented or improved cross-functional process of the organization or the administrative regulations of the organization. planning the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; implementation of a cross-functional process of the organization or administrative regulations of the organization or its improvement; evaluating the effectiveness of the implementation of a cross-functional process of the organization or the administrative regulations of the</p>

4. Structure and content of the discipline.

Part-time education

The total labor intensity of the discipline is 5 credit units, i.e. 180 academic hours of which 108 hours are students' independent work. The discipline is studied in the 4th year.

Seventh semester: lectures - 36 hours, seminars and practical classes - 36 hours control form - exam.

The structure and content of the discipline "Business process management tools» by terms and types of work are reflected in the appendix.

The content of the sections of the discipline

Topic 1. Applied management tools

The concept and principles of management. Control functions. Implementation of management functions in practice. Management tools. Graph by G. Gantt. Visualization of the goal tree. Shell/DPM Matrix. MCC Matrix. Matrix HoferSchendel. Ansoff matrix. Matrix "Price-quality". Competitiveness polygon. Three-dimensional matrices. Formation of organizational structures of management.

Topic 2. Methods of making managerial decisions

The concept and types of management decisions. Stages and methods of making managerial decisions, optimization of managerial decisions, goal tree, decision tree, heuristic methods of decision making. Mind map method, W. Disney method, focal object method, decision making under uncertainty. Topological methods, scenario methods, expert methods, criterion methods, hierarchical methods, psychological methods.

Topic 3. Risk management tools in management

The concept and types of risks. Analysis and assessment of project risks, the impact of risks on the activities of the organization, the calculation of professional risks, risk prevention methods. Ways to measure risk. Risk assessment methods: mathematical modeling, statistical, expert. Models, methodology and organization of the process of developing a management decision under risk. Risk management technologies and its main tools. Risk management strategies in the enterprise.

Topic 4. Making managerial decisions under conditions of uncertainty

The concept of uncertainty in management. The difference between uncertainty and risk. Determination of the probabilities of changes in the internal and external environment, mathematical expectation and dispersion of the occurrence of events, assessment of the degree of variation of events. Decision matrix. Wald criterion (maximin criterion), maximax criterion, Hurwitz criterion (optimism-pessimism criterion or alpha criterion), Savage criterion (loss criterion from minimax).

Topic 5. Qualitative and quantitative methods for the development and adoption of managerial decisions

The main stages of the process of development and adoption of managerial decisions. The place of management decisions in the management process. The importance of making informed decisions to ensure successful professional activity. Correlation and correlation analysis, linear programming problems, building predictive models and foresight. Models of network planning and management. Discussion methods (commission method, trial method, brainstorming method and its modifications, six hats method, etc.), their advantages and disadvantages. Expert methods (nominal group method, ranking method, pair comparison method, expert classification method, Delphi method, etc.), their advantages and disadvantages. Features of the process of making a rational decision in a multi-criteria environment. The concept of Pareto optimality. Value functions. Methods and rules for choosing a solution in a multi-criteria environment (the rule of guaranteed advantages and disadvantages, the main characteristic, proximity to the ideal). Evaluation and measurement of the quality of management decisions. The effectiveness of management decisions. Features of making managerial decisions in various areas of professional activity.

Topic 6. Management decision support system

Prospects and main directions of development of decision support systems, their role in the management of the organization. Information-analytical systems. Decision making process. Formal and informal decision-making methods (mathematical and computer modeling, basic optimization methods and operations research, expert evaluation methods, artificial intelligence methods and expert systems): problem setting and

computational methods, advantages and disadvantages, opportunities and scope. Analysis of the methods of situational modeling and scenario calculations. Combination of formal and informal approach in man-machine decision-making procedures. The role of the decision maker (DM) in the formulation of tasks for the selection and implementation of variant synthesis procedures Methods of simulation modeling,

Topic 7. Modeling of management processes

The role of modeling in the study of phenomena and processes. Classification of modeling methods. Signs of classification. Basic principles and stages of modeling. The concept of the subject area of modeling. System approach in process modeling. Modeling in management. Mathematical models used in the development and adoption of managerial decisions: simulation, econometric, reliability assessments. The essence of the structural approach to modeling processes. The main provisions of the structural approach to modeling. Petri diagrams. Methodology of structural analysis and design SADT. A family of IDEF modeling methodologies. Functional model of the system. The concept of a functional block. Graphical representation of the model.

Topic 8. Modeling of organizational systems.

The concept of organizational systems. Goals, features, effective areas of organizational systems modeling. Types of organizational systems. Classification of problems of management of organizational systems. The concept and classification of organizational mechanisms in organizational systems. Graphic and visual models, Zachman model, logical models. Analytical and simulation models. Combined (analytical and simulation) models. Methods for machine implementation of models. Basic concepts of the theory of system modeling. Continuous-stochastic models (Q - schemes). Network models (N - schemes). Generalized (combined) models (A - schemes).

Topic 9. Foresight tools

Foresight definition. The history of the term. Building predictive models, mathematical forecasting, network graphs and their optimization. The concept of "critical technologies". "Foresight Fleet" in the Russian Federation. The concept of "Road maps". Foresight research technology: a combination of "product" (forecasts, scenarios, priorities) and "process" (establishing links between all stakeholders). Triangle of foresight methods.

Rhombus of foresight methods. Stages of foresight research. Foresight formation rules. Foresight horizon. Foresight focus. Foresight varieties.

5. Educational technologies

Methods of teaching the discipline "Business process management tools» and the implementation of a competence-based approach in the presentation and perception of the material involves the use of the following active and interactive forms of conducting group, individual, classroom classes in combination with extracurricular work in order to form and develop the professional skills of students:

- oral questioning;
- report (message)

6. Evaluation tools for current monitoring of progress, intermediate certification based on the results of mastering the discipline and educational and methodological support for students' independent work.

In the learning process, the following assessment forms of independent work of students, assessment tools for monitoring progress and intermediate assessments are used:

- oral questioning;
- report (message).

Sample questions for an oral survey, topics of reports for current control, questions for credits, questions for the exam are given in the appendix.

When performing current control, it is possible to use test material. Samples of control questions and tasks for conducting current control are given in the appendix. When implementing the undergraduate program, the organization has the right to use e-learning and distance learning technologies. All materials are placed in the LMS of the Moscow Poly (<https://online.mospolytech.ru/>).

When teaching people with disabilities, e-learning and distance learning technologies should provide for the possibility of receiving and transmitting information in accessible to them

6.1. Fund of assessment tools for conducting intermediate certification of students in the discipline (module).

6.1.1. List of competencies indicating the stages of their formation in the process of mastering the educational program

As a result of mastering the discipline, the following competencies are formed:

Competency code	As a result of mastering the educational program, the student must have
PC-2	Able to design and implement cross-functional processes of an organization

In the process of mastering the educational program, these competencies, including their individual components, are formed in stages in the course of mastering disciplines by students in accordance with the curriculum and calendar schedule of the educational process.

6.1.2. Description of indicators and criteria for assessing competencies formed on the basis of the results of mastering the discipline (module), description of assessment scales

An indicator of competency assessment at various stages of their formation is the achievement by students of the planned learning outcomes in the discipline (module).

PC-2. Able to design and implement cross-functional processes of an organization				
IPK-2.1. Knows methods of designing functional role models; methods of structural decomposition of cross-functional processes and administrative regulations; principles and methods for measuring and analyzing performance indicators of cross-functional processes and administrative regulations; principles and methods for translating the organization's goals into indicators of cross-functional processes and administrative regulations; methods and techniques of process optimization; principles and rules for working with documents and with regulatory and methodological documentation; specialized software for process control; basics of operational management; fundamentals of economics, cost accounting and performance evaluation; theory of process management; principles of integration of corporate information systems; basics of project management; principles and methods of change management;

Scales for assessing the results of intermediate certification and their description:

Full-time education

Form of intermediate certification: exam.

Intermediate certification of students in the form of an exam is carried out based on the results of all types of educational work provided for by the curriculum for a given discipline (module), while taking into account the results of current monitoring of progress during the semester. The assessment of the degree of achievement by students of the planned learning outcomes in the discipline (module) is carried out by the teacher conducting classes in the discipline (module) by the method of expert assessment. Based on the results of the intermediate attestation for the discipline (module), the mark "excellent", "good", "satisfactory" or "unsatisfactory" is given.

Only students who have completed all types of educational work provided for by the work program (oral survey, report) are allowed to intermediate certification.

Scale evaluation	Description
Excellent	All types of educational work provided for by the curriculum were completed. The student demonstrates the correspondence of knowledge, skills and abilities given in the tables of indicators, operates with the acquired knowledge, skills, skills, applies them in situations of increased complexity. In this case, minor errors, inaccuracies, difficulties in analytical operations, transferring knowledge and skills to new, non-standard situations can be made.
Good	All types of educational work provided for by the curriculum were completed. The student demonstrates incomplete, correct correspondence of knowledge, skills, and abilities given in the tables of indicators, or if 2-3 minor errors were made at the same time.
Satisfactorily	All types of educational work provided for by the curriculum were completed. The student demonstrates the conformity of knowledge, which covers the main, most important part of the material, but at the same time one significant error or inaccuracy was made.
unsatisfactory	One or more types of educational work provided for by the curriculum have not been completed. The student demonstrates incomplete correspondence of knowledge, skills and abilities given in the tables of indicators, significant errors are made, the lack of knowledge, skills and abilities is manifested in a number of indicators, the student experiences significant difficulties in operating knowledge and skills when transferring them to new situations.

Part-time education

Form of intermediate certification: exam.

Intermediate certification of students in the form of an exam is carried out based on the results of all types of educational work provided for by the curriculum for a given discipline (module), while taking into account the results of current monitoring of progress during the semester. The assessment of the degree of achievement by students of the planned learning outcomes in the discipline (module) is carried out by the teacher conducting classes in the discipline (module) by the method of expert assessment. Based on the results of the intermediate attestation for the discipline (module), the mark "excellent", "good", "satisfactory" or "unsatisfactory" is given.

Only students who have completed all types of educational work provided for by the work program (oral survey, report) are allowed to intermediate certification.

Evaluation scale	Description

Excellent	All types of educational work provided for by the curriculum were completed. The student demonstrates the correspondence of knowledge, skills and abilities given in the tables of indicators, operates with the acquired knowledge, skills, skills, applies them in situations of increased complexity. In this case, minor errors, inaccuracies, difficulties in analytical operations, transferring knowledge and skills to new, non-standard situations can be made.
Good	All types of educational work provided for by the curriculum were completed. The student demonstrates incomplete, correct correspondence of knowledge, skills, and abilities given in the tables of indicators, or if 2-3 minor errors were made at the same time.
Satisfactorily	All types of educational work provided for by the curriculum were completed. The student demonstrates the conformity of knowledge, which covers the main, most important part of the material, but at the same time one significant error or inaccuracy was made.
Unsatisfactory	One or more types of educational work provided for by the curriculum have not been completed. The student demonstrates incomplete correspondence of knowledge, skills and abilities given in the tables of indicators, significant errors are made, the lack of knowledge, skills and abilities is manifested in a number of indicators, the student experiences significant difficulties in operating knowledge and skills when transferring them to new situations.

The evaluation funds are presented in annex 1 to the work program.

7. Educational, methodological and information support of the discipline.

8. Logistics support of discipline.

Audience for lectures and seminars of the general fund. Training tables with benches, classroom board, portable multimedia complex (projector, projection screen, laptop). Teacher's workplace: table, chair.

9. Guidelines for students when working on lecture notes during the lecture

Lecture - a systematic, consistent, monologue presentation by the teacher of educational material, as a rule, of a theoretical nature. When preparing a lecture, the teacher is guided by the working program of the discipline. In the course of lectures, it is recommended to keep a summary, which will later allow you to recall the studied educational material, to supplement the content during independent work with literature.

You should also pay attention to categories, formulations that reveal the content of certain phenomena and processes, scientific conclusions and practical recommendations, positive experience in oratory. It is advisable to leave fields in the working notes on which to make notes from the recommended literature, supplementing the material of the lecture heard, as well as emphasizing the particular importance of certain theoretical positions.

Lecture conclusions summarize the teacher's reflections on educational issues. The teacher provides a list of used and recommended sources for studying a particular topic. At the end of the lecture, students have the opportunity to ask questions to the teacher on the topic of the lecture. When lecturing on the discipline, electronic multimedia presentations can be used.

Guidelines for students when working at the seminar

Seminars are implemented in accordance with the working curriculum with consistent study of the topics of the discipline. In preparation for the seminars, the student is recommended to study the basic literature, get acquainted with additional literature, new publications in periodicals: magazines, newspapers, etc. In this case, the recommendations

of the teacher and the requirements of the curriculum should be taken into account. It is also recommended to refine your lecture notes by making appropriate entries in it from the literature recommended by the teacher and provided by the curriculum. Abstracts should be prepared for presentations on all educational issues submitted to the seminar. Since the student's activity in seminars is the subject of monitoring his progress in mastering the course, preparation for seminars requires a responsible attitude.

Guidelines for students on the organization of independent work

Independent work of students is aimed at independent study of a separate topic of the academic discipline. Independent work is mandatory for each student, its volume is determined by the curriculum. During independent work, the student interacts with the recommended materials with the participation of the teacher in the form of consultations. The electronic library system (electronic library) of the university provides the possibility of individual access for each student from any point where there is access to the Internet.

10. Guidelines for the teacher (Guidelines for making presentations)

A presentation (from the English word - presentation) is a set of color slide pictures on a specific topic, which is stored in a special format file with the PP extension. The term "presentation" (sometimes called "slide film") is associated primarily with the information and advertising functions of pictures that are designed for a certain category of viewers (users).

Multimedia computer presentation is:

- dynamic synthesis of text, image, sound;
- the most modern software interface technologies;
- interactive contact of the speaker with the demonstration material;
- mobility and compactness of information carriers and equipment;
- ability to update, supplement and adapt information;
- low cost.

Rules for the design of computer presentations

General Design Rules

Many designers argue that there are no laws and rules in design. There are tips, tricks, tips. Design, like any kind of creativity, art, like any way of some people to communicate with others, like language, like thought, will bypass any rules and laws. However, there are certain recommendations that should be followed, at least for novice designers, until they feel the strength and confidence to create their own rules and recommendations.

Font design rules:

- Serif fonts are easier to read than sans-serif fonts;
- Capital letters are not recommended for body text.
- Font contrast can be created through: font size, font weight, style, shape, direction, and color.
- Rules for choosing colors.
- The color scheme should consist of no more than two or three colors.
- There are incompatible color combinations.
- Black color has a negative (gloomy) connotation.
- White text on a black background is hard to read (inversion is hard to read).

Presentation design guidelines

In order for the presentation to be well perceived by the audience and not cause negative emotions (subconscious or completely conscious), it is necessary to follow the rules for its design.

The presentation involves a combination of information of various types: text, graphics, musical and sound effects, animation and video clips. Therefore, it is necessary to take into account the specifics of combining fragments of information of various types. In addition, the design and demonstration of each of the listed types of information is also subject to certain rules. So, for example, for textual information, the choice of font is important, for graphic information - brightness and color saturation, for their best joint perception, optimal relative position on the slide is necessary.

Consider recommendations for the design and presentation of various types of materials on the screen.

Formatting text information:

- font size: 24-54 pt (headline), 18-36 pt (plain text);
- font color and background color should contrast (the text should be well read), but not hurt the eyes;
- font type: smooth sans-serif font for body text (Arial, Tahoma, Verdana), decorative font can be used for heading if it is legible;
- italics, underlining, bold, capital letters are recommended to be used only for semantic highlighting of a text fragment.

Formatting graphic information:

- drawings, photographs, diagrams are designed to supplement textual information or convey it in a more visual form;
- it is desirable to avoid drawings in the presentation that do not carry a semantic load if they are not part of the style design;
- the color of graphic images should not contrast sharply with the overall style of the slide;
- illustrations are recommended to be accompanied by explanatory text;
- if a graphic image is used as a background, then the text on this background should be well readable.

The content and location of information blocks on the slide:

- there should not be too many information blocks (3-6);
- the recommended size of one information block is no more than 1/2 of the slide size;
- it is desirable to have on the page blocks with different types of information (text, graphs, diagrams, tables, figures) that complement each other;
- keywords in the information block must be highlighted;
- information blocks should be placed horizontally, blocks related in meaning - from left to right;
- the most important information should be placed in the center of the slide;
- the logic of presenting information on slides and in the presentation should correspond to the logic of its presentation.

In addition to the correct arrangement of text blocks, one must not forget about their content - the text. In no case should it contain spelling errors. You should also take into account the general rules for formatting the text.

After creating a presentation and its design, you need to rehearse its presentation and your performance, check how the presentation will look like as a whole (on a computer screen or projection screen), how quickly and adequately it is perceived from different audience locations, under different lighting conditions, noise accompaniment, in an environment as close as possible to the real conditions of the performance.

The work program was compiled on the basis of the Federal State Educational Standard of Higher Education in the direction of training bachelors on March 38, 02 "Management", approved by order of the Ministry of Education and Science of the Russian Federation of August 12, 2020 No. 970 (Registered in the Ministry of Justice of Russia on August 25, 2020 No. 59449).

The program was made up of:

The program was made by:

Head of the Department "Management"

Candidate of Economics, Associate Professor

/ Alenina E.E./

The program was approved at a meeting of the Department of Management

August 29, 2022, Protocol No. 1

INDICATOR OF THE LEVEL OF FORMATION OF COMPETENCES

Business process management tools Direction of training: 38.03.02 "Management"						
In the process of mastering this discipline, the student forms and demonstrates the following competencies:						
COMPETENCES			List of components	Competence formation technology	Assessment Tool Form*	Degrees of levels of development of competencies
IN DEX	FORMULATION					
PC-2	Able to design and implement cross-functional processes of an organization	IPK-2.1. Knows methods of designing functional role models; methods of structural decomposition of cross-functional processes and administrative regulations; principles and methods for measuring and analyzing performance indicators of cross-functional processes and administrative regulations; principles and methods for translating the organization's goals into indicators of cross-functional processes and administrative regulations; methods and techniques of process optimization; principles and rules for working with documents and with regulatory and methodological documentation; specialized software for process control; basics of operational management; fundamentals of economics, cost accounting and performance evaluation; theory of process management; principles of integration of corporate information systems; basics of project management; principles and methods of change management;	Know: on the basic principles of the functioning of the organization; Be able to: identify new market opportunities and implement the formation of new business models; Own: skills to use the basic principles of the functioning of the organization.	lecture, independent work, seminars	UO, test, exam	A basic level of - knowledge of basic management tools Enhanced level - ability and skills to assess the effectiveness of the use of management tools
		IPK-2.2. Able to aggregate, structure and generalize information; develop local regulations in the field of managing cross-functional processes; use specialized software for process management; control the compliance of the developed documents with regulatory and methodological documentation; measure the effectiveness of a cross-functional process or administrative procedure; identify the potential for improving the efficiency of a cross-functional process or administrative procedure; formulate and justify proposals to improve the efficiency of cross-functional processes or administrative regulations; communicate, hold workshops, find consensus; evaluate the resources needed to improve a cross-functional process or administrative procedure;	Know: about the main tools of organization management; know how to apply methods for developing new types of products; Own: skills to identify new market opportunities and form new business models.			

		<p>IPK-2.3. Has the skills to systematize the collected information about the cross-functional process of the organization or the administrative regulations of the organization; documenting the cross-functional process of the organization or developing the administrative regulations of the organization in accordance with the requirements of regulatory and methodological documentation; development of an executable cross-functional process of the organization or administrative regulations of the organization using specialized software for process management; development of control points that allow assessing the degree of implementation of the regulations, and methods for measuring the performance indicators of the organization's cross-functional process or the organization's administrative regulations; development of proposals to improve the efficiency of the cross-functional process of the organization or the administrative regulations of the organization; registration of the results of the development or refinement of the cross-functional process of the organization or the administrative regulations of the organization; planning the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; implementation of a cross-functional process of the organization or administrative regulations of the organization or its improvement; evaluating the effectiveness of the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; instructing personnel on the implemented or improved cross-functional process of the organization or the administrative regulations of the organization. registration of the results of the development or refinement of the cross-functional process of the organization or the administrative regulations of the organization; planning the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; implementation of a cross-functional process of the organization or administrative regulations of the organization or its improvement; evaluating the effectiveness of the implementation of a cross-functional process of the organization or the administrative regulations of the organization or its improvement; instructing personnel on the implemented or improved cross-functional process of the organization or the administrative regulations of the</p>	<p>Know:</p> <p>basic methods for assessing the effectiveness of the use of organization resources;</p> <p>Be able to:</p> <p>collect, process and analyze information about the competitive environment;</p> <p>Own:</p> <p>skills in applying the collection, processing and analysis of information about the competitive environment.</p>

List of questions for oral interview / interview

by discipline "Business process management tools» (formation of competence PC-2)

1. Situational approach to management.
2. System approach to management.
3. Types of planning, the essence of strategic planning
4. Mission concept. Essence and purpose
5. Goals and objectives of the organization. "Tree of Goals"
6. The external environment of the organization: characteristics, impact.
7. Analysis of the external environment of the organization: factors of indirect influence (PEST-analysis)
8. Analysis of the external environment of the organization: factors of direct impact (competitive analysis)
9. Analysis of the internal environment of the organization.
10. Identification of the strengths and weaknesses of the organization, threats and opportunities (SWOT analysis, SNW analysis)

11. Strategic positioning of the company in relation to product life cycles (Arthur Little matrix). Strengths and weaknesses of the matrix Arthur Little.
12. Strategic positioning of the company in relation to the life cycles of industries (the Hofer-Schendel matrix). Strengths and weaknesses of the matrix Hofer-Shandel.
13. Strategic analysis of the prospects for the company's market position using the BCG matrix.
14. Strategic analysis of the company's market position prospects using McKinsey matrices.
15. Shell's Directed Policy Portfolio Matrix and its main strategic options.
16. Corporate (basic) strategies of the company.
17. Competitive (business) strategies of the organization.
18. Role (innovative-behavioral) strategies of the company.
19. Production functional strategies companies.
20. The role and functions of decisions in the management process.
21. Typology and classification of management decisions.
22. Situational and behavioral factors influencing the development of managerial decisions.
23. Information support of decisions and information security.
24. Information support of director's decisions.
25. Influence of traditions and specifics of the enterprise on the development of management decisions.
26. The role of the human factor in the process of developing a management decision.
27. Risk as an inevitable factor of entrepreneurial activity
28. Risk as a probabilistic category
29. The essence of risk and its main features
30. Risk inconsistency and its manifestation
31. Alternative risk and its essence
32. Uncertainty as a specific feature of risk
33. The main sources of threats and their classification
34. Objective risk factors and their classification
35. Subjective risk factors and their classification
36. The concept, types and scope of expert methods for obtaining and evaluating marketing information.
37. Focus group as a tool for collecting primary data.
38. Projection methods for collecting primary data.
39. Observation as a tool for collecting primary data.
40. Depth interview as a tool for collecting primary data.
41. Survey methods.
42. The procedure and rules for the development of questionnaires.
43. Questionnaire. Questionnaire project. Questionnaire development and testing. Question wording options.
44. Questioning as a tool for collecting primary data.

45. Measurement and scaling. Main types of scales.
46. Basic models of organizational structures.
47. General model of the management hierarchy.
48. Statement of the problem of stimulation.
49. Features of modeling basic incentive mechanisms.
50. Features of modeling incentive mechanisms in multi-element systems.
51. Classification of problems of management of organizational systems.
52. Explain the connection between the concepts of system, model, goal, criterion, restrictions, optimal solution.
53. Features of the choice of solutions under uncertainty on specific examples.
54. Scope of Foresight (SCOPE).
55. Development of proposals for the participants of the Foresight study.
56. Information support of Foresight research.
57. Organizational support of Foresight.
58. Possible roles in the Foresight organization.
59. Purposes of application and tools of the Delphi survey in Foresight programs
60. The need to carry out studies of cultural and social aspects by the Delphi method

Criteria for assessing the oral survey (interview)

The grade "excellent" is given to the student if the student is oriented in the theoretical material; has an idea of the main approaches to the material presented; knows the definitions of the main theoretical concepts of the topic being presented, knows how to apply theoretical information to analyze practical material, basically demonstrates a willingness to apply theoretical knowledge in practice and mastering most of the indicators of formed competencies.

The grade "good" is given to the student if the student is oriented in the theoretical material; has an idea about the main approaches to the material presented, but finds it difficult to answer some questions; knows the definitions of the main theoretical concepts of the topic being presented, but does not fully reflect the essence of the problem under consideration, basically knows how to apply theoretical information to analyze practical material, basically demonstrates a willingness to apply theoretical knowledge in practice and mastering most of the indicators of formed competencies.

The grade "satisfactory" is given to the student if insufficient knowledge of the theoretical material, the basic concepts of the topic being presented is shown, not always with the correct and necessary use of special terms, concepts and categories; the analysis of the practical material was fuzzy.

An "unsatisfactory" grade is given in cases where the conditions for a "satisfactory" grade are not met.

52. Modeling the mechanisms of internal prices in organizational systems.
53. Modeling of expertise mechanisms in organizational systems.
54. Basic model of contract theory.
55. Modeling competitive mechanisms in organizational systems
56. Modeling of mechanisms for information support of processes in an organization.
57. Modeling of complex systems.
58. Planning of computational experiments.
59. Scenarios as a mechanism for the formation of an adaptive strategy and adaptive policy
60. The difference between the scenario approach and other Foresight methods

N o .	Criterion	Grade			
		ex.	choir.	satisfactory	unsatisfactory
o n e	Report Structure	The report contains semantic parts, balanced in volume	The report contains three semantic parts, unbalanced in volume	One of the semantic parts of the report is missing	The report does not trace the presence of semantic parts
2	Content of the report	The content reflects the essence of the problem under consideration and the main results obtained.	The content does not fully reflect the essence of the problem under consideration or the main results obtained.	The content does not fully reflect the essence of the problem under consideration and the main results obtained.	The content does not reflect the essence of the problem under consideration or the main results obtained.
3	Ownership of the material	The student fully owns the material presented, is oriented in the problem, freely answers questions	The student owns the material presented, is oriented in the problem, finds it difficult to answer some questions	The student is not fluent enough in the material presented, poorly oriented in the problem	The student does not own the material presented, poorly oriented in the problem
f o u r	Relevance to the topic	The presented material is fully consistent with the stated topic.	The material presented contains elements that are not relevant to the topic.	The material presented contains a large number of elements that are not related to the topic.	The material presented is slightly relevant to the topic.
