WORKING PROGRAM OF THE DISCIPLINE

"Perspective management"

Field of study

38.03.02 Management

Educational program (profile)

"Business Process Management"

Qualification (degree)

Bachelor

Form of study

Part-time

Moscow 2022

1. The goals of mastering the discipline

The main goal of mastering the discipline "Perspective Management" should include the formation of students' knowledge and skills in the field of long-term planning technologies.

The main tasks of mastering the discipline "Perspective management" should include:

- Mastering the theory of methodology and technologies of planning and forecasting.
- Familiarization with domestic and foreign experience in the use of advanced planning technologies.
- Assessment of the feasibility of applying long-term planning.

2. The place of the discipline in the structure of the bachelor's program

The discipline "Perspective Management" is one of the elective academic disciplines of the basic cycle (B1.2.ED) of the bachelor's degree program.

The discipline "Perspective Management" is interconnected logically and meaningfully and methodically with the following disciplines and practices of the EP:

- Project activity
- Fundamentals of Management
- Business process management
- Economic theory

3. The list of planned learning outcomes for the discipline (module), correlated with the planned results of mastering the educational program.

As a result of mastering the discipline, students form the following competence and the following learning outcomes should be achieved as a stage in the formation of the relevant competence:

Competency code	As a result of mastering the educational program, the student must have	List of planned learning outcomes by discipline
PC-5	Capable of gathering information about business problems and identifying business opportunities in the organization	know: modern domestic and foreign experience in the use of advanced planning - technologies. be able to: formulate goals, objectives and a set of measures for the application of advanced planning technology. own: methods and approaches to identify the reasons for the use of advanced planning technologies; forecasting skills.

4. Structure and content of the discipline

Part-time education

The total labor intensity of the discipline is 5 credit units, i.e. 180 academic hours (of which 126 hours are independent work of students).

Sections of the discipline "Perspective Management" are studied in the third year.

Sixth semester:lectures - 18 hours, seminars - 36 hours, the form of control - an exam.

The structure and content of the discipline "Perspective Management" in terms of terms and types of work are reflected in the Appendix.

The content of the sections of the discipline

Topic 1: Management development trends in the context of economic development

The main milestones in the development of management. Influence of economic development on the development of new directions in management. The need to develop promising management for the development of the economy in the context of digitalization.

Topic 2: Forecasting and planning in management.

Planning and forecasting as the main functions of classical management theory. Planning and forecasting as tools of strategic management and key technologies for perspective management.

Topic 3: Strategic management

The main stages of strategy development, goal setting and strategy, Strategic management and its features, strategic management in the face of change.

Topic 4: Business Process Management.

Business process management as the main management technology of modern management. Basic business process management. Efficiency of business process management.

Topic 5: Business Process Engineering.

Business engineering as a strategic management technology. Fundamentals of business engineering. Engineering and digital economy.

Topic 6: Controlling.

Controlling as a function of management. Controlling and its importance in the digital economy. Controlling as a source of innovation and change.

Topic 7: Innovation management

Innovation as a basis for economic development. Innovation management and its features. The main directions of development of innovation management.

Topic 8: Management Decision Making

Classification of management decisions, requirements for management decisions, evaluation criteria and basic technologies for making management decisions. Influence of the decision on the quality and efficiency of management.

Topic 9: Human Resource Management

Human resources as strategic resources of the organization. The main modern technologies for the development of human resources. Influence of human resources on competitiveness, ability to develop and quality of management.

5. Educational technologies

The methodology for teaching the discipline "Perspective Management" and the implementation of a competency-based approach in the presentation and perception of the material provides for the use of the following active and interactive forms of conducting group, individual, classroom classes in combination with extracurricular work in order to form and develop the professional skills of students:

- lectures;
- preparation for seminars;
- preparation, presentation and discussion of reports at seminars.

The proportion of classes conducted in interactive forms is determined by the main goal of the educational program, the peculiarity of the contingent of students and the content of the discipline "Perspective management" and the discipline as a whole makes up at least 50% of classroom lessons.

6. Evaluation tools for current monitoring of progress, intermediate certification based on the results of mastering the discipline and educational and methodological support for independent work of students

In the learning process, the following assessment forms of independent work of students, assessment tools for monitoring progress and intermediate assessments are used:

Evaluative means of monitoring progress include control questions and tasks in the form of blank testing, participation in a business game, and presentation of a report.

When performing current control, it is possible to use test material. Samples of control questions and tasks for conducting current control are given in the appendix. When implementing the undergraduate program, the organization has the right to use e-learning and distance learning technologies.

When teaching people with disabilities, e-learning and distance learning technologies should provide for the possibility of receiving and transmitting information in forms accessible to them.

Samples of questions and tasks for conducting current control are given in the appendix.

6.1. Fund of assessment tools for conducting intermediate certification of students in the discipline (module).

6.1.1. A list of competencies indicating the stages of their formation in the process of mastering the educational program.

As a result of mastering the discipline (module), the following competence is formed:

Competency code	As a result of mastering the educational program, the student must have
PC-5	Capable of gathering information about business problems and identifying business opportunities in the organization

In the process of mastering the educational program, this competence, including their individual components, is formed in stages during the development of disciplines (modules), practices by students in accordance with the curriculum and calendar schedule of the educational process.

6.1.2. Description of indicators and criteria for assessing competencies formed on the basis of the results of mastering the discipline (module), description of assessment scales

An indicator of competency assessment at various stages of their formation is the achievement by students of the planned learning outcomes in the discipline (module).

PC-5 -Capable of gathering information about business problems and identifying business opportunities in the organization

be able to: formulate goals, objectives and a set of measures for the application of advanced planning technology.	The student does not know how or insufficiently knows how to use quantitative and qualitative methods for conducting scientific research and managing innovation processes.	The student demonstrates incomplete compliance with the following skills: use quantitative and qualitative methods to conduct research and manage innovation processes.	The student demonstrates partial compliance with the following skills: use quantitative and qualitative methods to conduct research and manage innovation processes. Skills are mastered, but minor errors, inaccuracies, difficulties in analytical operations, transferring skills to new, non-standard situations are allowed.	The student demonstrates full compliance with the following skills: use quantitative and qualitative methods to conduct research and manage innovation processes. Freely operates with acquired skills, applies them in situations of increased complexity.
own: methods and approaches to identify the reasons for the use of advanced planning technologies, forecasting skills	The student does not possess or insufficiently possesses the skills to assess the economic and social conditions for the implementation of innovative programs; - methods and tools for forecasting and planning innovative development.	The student has the skills to assess the economic and social conditions for the implementation of innovative programs; - methods and tools for forecasting and planning innovative development. Forecasting skills, significant errors are made, there is a lack of skills in a number of indicators, the student experiences significant difficulties in applying skills in new situations.	The student partially owns the skills of assessing the economic and social conditions for the implementation of innovative programs; - methods and tools for forecasting and planning innovative development. Forecasting skills are mastered, but minor errors, inaccuracies, difficulties in analytical operations, transferring skills to new, non-standard situations are allowed.	The student fully owns the skills of assessing the economic and social conditions for the implementation of innovative programs; - methods and tools for forecasting and planning innovative development, freely applies the acquired skills in situations of increased complexity.

Scales for assessing the results of intermediate certification and their description:
Form of intermediate certification: exam.

Intermediate certification of students in the form of an exam is carried out based on the results of all types of educational work provided for by the curriculum for a given discipline (module), while taking into account the results of current monitoring of progress during the semester. The assessment of the degree of achievement by students of the planned learning outcomes in the discipline (module) is carried out by the teacher conducting classes in the discipline (module) by the method of expert assessment. Based on the results of the intermediate attestation for the discipline (module), the mark "excellent", "good", "satisfactory" or "unsatisfactory" is given.

Only students who have completed all types of academic work provided for by the work program in the discipline "Perspective Management" are allowed to the intermediate certification (passed the intermediate control)

Evaluation scale	Description
Excellent	All types of educational work provided for by the curriculum were completed. The student demonstrates the correspondence of knowledge, skills and abilities given in the tables of indicators, operates with the acquired knowledge, skills, skills, applies them in situations of increased complexity. In this case, minor errors, inaccuracies, difficulties in analytical operations, transferring knowledge and skills to new, non-standard situations can be made.
Good	All types of educational work provided for by the curriculum were completed. The student demonstrates incomplete, correct correspondence of knowledge, skills, and abilities given in the tables of indicators, or if 2-3 minor errors were made at the same time.
Satisfactorily	All types of educational work provided for by the curriculum were completed. The student demonstrates the conformity of knowledge, which covers the main, most important part of the material, but at the same time one significant error or inaccuracy was made.
unsatisfactory	One or more types of educational work provided for by the curriculum have not been completed. The student demonstrates incomplete correspondence of knowledge, skills and abilities given in the tables of indicators, significant errors are made, the lack of knowledge, skills and abilities is manifested in a number of indicators, the student experiences significant difficulties in operating knowledge and skills when transferring them to new situations.

The evaluation funds are presented in the annex to the work program.

7. Educational, methodological and information support of the discipline "Perspective management"

1. Stegny V. N. Forecasting and planning textbook for universities - M.: Yurayt Publishing House, 2021. - 210 p. —ISBN 978-5-534-14403-1. — Text: electronic // Educational platform Urayt [website]. — URL: <https://urait.ru/bcode/477537>

2. Nevskaya N. A. Macroeconomic planning and forecasting in 2 hours. Part 1: textbook and workshop for universities - 2nd ed., corrected. - M.: Yurait Publishing House, 2021. - 310 p. - ISBN 978-5-534-02360-2. — Text: electronic // Educational platform Urayt [website]. - url:<https://urait.ru/bcode/472308b>)

b) additional literature:

1. Gerchikova I.N. Management: a textbook for universities. M.: Unity-Dana, 2015. 510 p. <http://www.knigafund.ru/books/197258/read#page1>

The possibility of using e-learning, distance learning technologies is provided.

eight.Logistics support of discipline.

Audience for lectures and seminars of the general fund. Training tables with benches, classroom board, portable multimedia complex (projector, projection screen, laptop). Teacher's workplace: table, chair.

9. Guidelines for students when working on lecture notes during the lecture

Lecture - a systematic, consistent, monologue presentation by the teacher of educational material, as a rule, of a theoretical nature. When preparing a lecture, the teacher is guided by the working program of the discipline. In the course of lectures, it is recommended to take notes, which will later allow you to recall the studied educational material, supplement the content during independent work with literature, and prepare for the exam.

You should also pay attention to categories, formulations that reveal the content of certain phenomena and processes, scientific conclusions and practical recommendations, positive experience in oratory. It is advisable to leave fields in the working notes on which to make notes from the recommended literature, supplementing the material of the lecture heard, as well as emphasizing the particular importance of certain theoretical positions.

Lecture conclusions summarize the teacher's reflections on educational issues. The teacher provides a list of used and recommended sources for studying a particular topic. At the end of the lecture, students have the opportunity to ask questions to the teacher on the topic of the lecture. When lecturing on the discipline, electronic multimedia presentations can be used.

Guidelines for students when working at the seminar

Seminars are implemented in accordance with the working curriculum with consistent study of the topics of the discipline. In preparation for the seminars, the student is recommended to study the basic literature, get acquainted with additional literature, new publications in periodicals: magazines, newspapers, etc. In this case, the recommendations of the teacher and the requirements of the curriculum should be taken into account. It is also recommended to refine your lecture notes by making appropriate entries in it from the literature recommended by the teacher and provided by the curriculum. Abstracts should be prepared for presentations on all educational issues submitted to the seminar.

Since the student's activity in seminars is the subject of monitoring his progress in mastering the course, preparation for seminars requires a responsible attitude. In interactive classes, students should be active.

Guidelines for students on the organization of independent work

Independent work of students is aimed at independent study of a separate topic of the academic discipline. Independent work is mandatory for each student, its volume is determined by the curriculum. During independent work, the student interacts with the recommended materials with the participation of the teacher in the form of consultations. To perform independent work, methodological support is provided. The electronic library system (electronic library) of the university provides the possibility of individual access for each student from any point where there is access to the Internet.

10. Methodological recommendations for the teacher (Guidelines for making presentations)

A presentation (from the English word - presentation) is a set of color slide pictures on a specific topic, which is stored in a special format file with the PP extension. The term "presentation" (sometimes called "slide film") is associated primarily with the information and advertising functions of pictures that are designed for a certain category of viewers (users).

Multimedia computer presentation is:

- dynamic synthesis of text, image, sound;
- the most modern software interface technologies;
- interactive contact of the speaker with the demonstration material;
- mobility and compactness of information carriers and equipment;
- ability to update, supplement and adapt information;
- low cost.

Rules for the design of computer presentations

General Design Rules

Many designers argue that there are no laws and rules in design. There are tips, tricks, tips. Design, like any kind of creativity, art, like any way of some people to communicate with others, like language, like thought, will bypass any rules and laws.

However, there are certain recommendations that should be followed, at least for novice designers, until they feel the strength and confidence to create their own rules and recommendations.

Font design rules:

- Serif fonts are easier to read than sans-serif fonts;
- Capital letters are not recommended for body text.
- Font contrast can be created through: font size, font weight, style, shape, direction, and color.

• Rules for choosing colors.

• The color scheme should consist of no more than two or three colors.

• There are incompatible color combinations.

• Black color has a negative (gloomy) connotation.

• White text on a black background is hard to read (inversion is hard to read).

Presentation design guidelines

In order for the presentation to be well perceived by the audience and not cause negative emotions (subconscious or completely conscious), it is necessary to follow the rules for its design.

The presentation involves a combination of information of various types: text, graphics, musical and sound effects, animation and video clips. Therefore, it is necessary to take into account the specifics of combining fragments of information of various types. In addition, the design and demonstration of each of the listed types of information is also subject to certain rules. So, for example, for textual information, the choice of font is important, for graphic information - brightness and color saturation, for their best joint perception, optimal relative position on the slide is necessary.

Consider recommendations for the design and presentation of various types of materials on the screen.

Formatting text information:

• font size: 24-54 pt (headline), 18-36 pt (plain text);

• font color and background color should contrast (the text should be well read), but not hurt the eyes;

• font type: smooth sans-serif font for body text (Arial, Tahoma, Verdana), decorative font can be used for heading if it is legible;

• italics, underlining, bold, capital letters are recommended to be used only for semantic highlighting of a text fragment.

Formatting graphic information:

- drawings, photographs, diagrams are designed to supplement textual information or convey it in a more visual form;
- it is desirable to avoid drawings in the presentation that do not carry a semantic load if they are not part of the style design;
- the color of graphic images should not contrast sharply with the overall style of the slide;
- illustrations are recommended to be accompanied by explanatory text;
- if a graphic image is used as a background, then the text on this background should be well readable.

The content and location of information blocks on the slide:

- there should not be too many information blocks (3-6);
- the recommended size of one information block is no more than 1/2 of the slide size;
- it is desirable to have on the page blocks with different types of information (text, graphs, diagrams, tables, figures) that complement each other;
- keywords in the information block must be highlighted;
- information blocks should be placed horizontally, blocks related in meaning - from left to right;
- the most important information should be placed in the center of the slide;
- the logic of presenting information on slides and in the presentation should correspond to the logic of its presentation.

In addition to the correct arrangement of text blocks, one must not forget about their content - the text. In no case should it contain spelling errors. You should also take into account the general rules for formatting the text.

After creating a presentation and its design, you need to rehearse its presentation and your performance, check how the presentation will look like as a whole (on a computer screen or projection screen), how quickly and adequately it is perceived from different audience locations, under different lighting conditions, noise accompaniment, in an environment as close as possible to the real conditions of the performance.

The work program was compiled on the basis of the Federal State Educational Standard of Higher Education in the direction of training bachelors on March 38, 02 "Management", approved by order of the Ministry of Education and Science of the Russian Federation of August 12, 2020 No. 970 (Registered in the Ministry of Justice of Russia on August 25, 2020 No. 59449).

Report Evaluation Criteria

No	Criterion	Grade			
		ex.	choir.	satisfactory	unsatisfactory

ò n e	Report Structure	The report contains semantic parts, balanced in volume	The report contains three semantic parts, unbalanced in volume	One of the semantic parts of the report is missing	The report does not trace the presence of semantic parts
2	Content of the report	The content reflects the essence of the problem under consideration and the main results obtained.	The content does not fully reflect the essence of the problem under consideration or the main results obtained.	The content does not fully reflect the essence of the problem under consideration and the main results obtained.	The content does not reflect the essence of the problem under consideration or the main results obtained.
3	Ownership of the material	The student fully owns the material presented, is oriented in the problem, freely answers questions	The student owns the material presented, is oriented in the problem, finds it difficult to answer some questions	The student is not fluent enough in the material presented, poorly oriented in the problem	The student does not own the material presented, poorly oriented in the problem
f o u r	Relevance to the topic	The presented material is fully consistent with the stated topic.	The material presented contains elements that are not relevant to the topic.	The material presented contains a large number of elements that are not related to the topic.	The material presented is slightly relevant to the topic.

**Tests by discipline
"Perspective Management"
formation of competence PC-5**

1. How is current control carried out in the organization?

1. By hearing the employees of the organization at production meetings;
2. By monitoring the work of workers;
3. + With the help of a feedback system between the governing and managed systems;
4. By reporting at gatherings and meetings;
5. Superior structure.

2. Who should exercise control over the fulfillment of the tasks assigned to the team?

1. Specialists;
2. Workers;
3. + Leaders;
4. Individual leaders;

5. Ministries.

3. Control is:

1. + Type of management activity to ensure the fulfillment of certain tasks and the achievement of the goals of the organization;
2. Type of human activity;
3. Monitoring the work of the organization's personnel;
4. Monitoring the performance of individual tasks by personnel;
5. Constant review of how the organization is achieving its goals and adjusting its actions.

4. To reduce the need for control, it is advisable:

1. + Create organizational and socio-psychological conditions for staff;
2. Create appropriate social conditions for the staff;
3. Create appropriate organizational conditions for staff;
4. Constantly improve the system of stimulating the work of personnel;
5. Constantly improve the skills of the staff.

5. Control must be:

1. Objective and vowel;
2. Vowel and effective;
3. + Objective, businesslike, efficient, systematic and public.
4. efficient;
5. Current.

6. What is the basis of labor motivation in Japanese corporations?

1. Receiving high material rewards;
